**Ques**

1. A person is said to be a member of a set if he/she is included in the set.
2. A set is said to be a subset of another set if every element of the first set is also an element of the second set.
3. A set is said to be a proper subset of another set if it is a subset of the other set but not equal to it.
4. A set is said to be a universal set if it contains all the elements of the other sets.

$\frac{1}{2}$   
 Answer: A set is said to be a subset of another set if every element of the first set is also an element of the second set.

**Ques: How many subsets does a set have?**

Ans: If a set has  $n$  elements, then the number of subsets is  $2^n$ .

Example: A set has 3 elements, then the number of subsets is  $2^3 = 8$ .

Ques: How many proper subsets does a set have?

1. A set has  $n$  elements, then the number of proper subsets is  $2^n - 1$ .
2. A set has 3 elements, then the number of proper subsets is  $2^3 - 1 = 7$ .
3. A set has 4 elements, then the number of proper subsets is  $2^4 - 1 = 15$ .

The number of proper subsets of a set with  $n$  elements is  $2^n - 1$ .  
 Example: A set has 3 elements, then the number of proper subsets is  $2^3 - 1 = 7$ .  
 A set has 4 elements, then the number of proper subsets is  $2^4 - 1 = 15$ .
